| STAT | CULTY ADAPTERS FOR LOX LYEPIECES |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | 1. IRANODUCTION. These development objectives describe the requirements to be met in the design and fabrication of acuity adaptors. Opthalmic corrective devices) for the Standard lox eyepieces as currently used with the Zoom 70 stereoscope. |
| | 2. CONTENT. A device is needed which will permit photo interpreters, who now ally wear standard corrective eyeglasses, to remove them and still to able to properly utilize microstereoscopes. It appears that this can be done by adding the proper corrective opthalmic prescription to the stereoscope eyepieces themselves. There is some medical opinion which indicates that this would not only enable the P.I. to see better but would also serve to lessen overall eye fatigue. |
| | 3. REQUIREMENTS. |
| STAT | 3.1. Configuration. The prototype holders for the corrective optics must clip or clamp onto the standard lox eyepiece, as used with the Zoom 70 Stereoscope, and must be easily interchangeable from one eyepiece to another. The present color filter holder produced by is an example of a device which might be suitably modified for this particular application. |
| | 3.2. Lenses. Each set of two acuity adapters must have lenses ground to the prescriptions to be provided by the sponsor. The lenses shall be firmly and positively affixed to the holders to avoid the possibility of accidently becoming separated from them. The optical performance of the lenses must equal or exceed that of a standard eye glass configurations of the same prescription. |
| | 3.3. Index Marks. Each acuity adapter must be individually marked L.(for Left) or R (for Right) as appropriate and have another mark to indicate the top of the eyepiece. In addition each set of acuity adapters must have matched serial numbers engraved upon them to permit easy identification and to prevent inadvertent separation of sets. |

NGA Review Complete

when the adapters are not in use.
